| Project Address: | Building Permit: |
|-------------------------|-------------------------|

This forms part of the Building Permit documents for Class 1 Cooking Operations. All fields are required to be completed. The professional's initials in the right hand column indicate that the project is designed in compliance with this item. Note: refer to NFPA 96 for solid fuel-fired appliances (separate exhaust system). Code references refer to NFPA 96, 2014 unless noted otherwise.

If there are any discrepancies between this document and the drawings, this document will be deemed correct as to what will be constructed.

K2 - Kitchen Ventilation Details Checklist cont'd.

| No. | Item | Professional's initials signifying project complies (or mark N/A) |
|-----|--|---|
| 1 | All cooking equipment producing smoke or grease-laden vapours is under a hood complying with NFPA 96, 2014. | |
| 2 | <p>a) Rooftop exhaust is $\geq 10'-0"$ from property lines, including lane or street property lines, discharges $\geq 40"$ above the roof, and the fan housing outlet is $\geq 5'-0"$ horizontally from any combustible structure.</p> <p>b) Elevations of the building exterior have been provided if there is exterior ductwork.</p> <p>c) The protection around the duct (or clearance) continues up through the roof assembly to $18"$ above the roof (or reduced height if protection provided in compliance with 4.2.3).</p> | |
| 3 | <p>a) Wall exhaust termination is $\geq 10'-0"$ from:</p> <ul style="list-style-type: none"> ▪ combustible construction, including exterior wall cladding ▪ adjacent grade ▪ openings below or to the side ▪ adjacent buildings ▪ neighbouring private property lines ▪ city property lines, if no ecology unit provided <p>The termination is clear from openings per the formula in NFPA 96, 7.8.3 (i.e., approx. $\geq 32'-6"$ above and $\geq 16'-0"$ to the sides) and will be accessible for maintenance (i.e., approx. ≤ 11 ft above grade or a platform</p> <p>b) Elevations of the building exterior have been provided if there is exterior ductwork or a horizontal termination.</p> <p>c) The protection around the duct (or clearance) continues through the wall.</p> <p>d) Is an <i>ecology unit</i>¹ provided? Yes <input type="checkbox"/> / No <input type="checkbox"/></p> <p>e) For a wall termination, the exhaust flow is directed upward or perpendicularly outward from the wall face.</p> | |
| 4 | The exhaust is $\geq 10'-0"$ from any air intake and, per 7.8.1, ends outside the building. All requirements of NFPA 96, 7.8.2, 7.8.3 and 7.8.4 are satisfied. | |
| 5 | Exhaust ducts (including upstream and downstream of an <i>ecology unit</i>) are steel-welded, liquid-tight and the ducts and their supports are (choose one): min. 16-gauge carbon steel <input type="checkbox"/> / min. 18-gauge stainless steel <input type="checkbox"/> | |
| 6 | Exterior portions of ductwork and supports will be (choose one): noncorrosive stainless steel <input type="checkbox"/> /painted <input type="checkbox"/> /weather-protection coating <input type="checkbox"/> , namely: _____ | |
| 7 | All ducts lead as directly as practical to the exterior of the building and horizontal ducts are substantially pitched back to the hood to drain and collect the grease (min. 2% for horizontal ducts ≤ 75 ft, and min. 8.3% for horizontal ducts > 75 ft). | |
| 8 | Letter from Strata Council approving of the alterations to the building. | |
| 9 | <p>Ducts from different fire compartments are not combined into a single duct or single enclosure.</p> <p>Hood ducts are not combined with any other building ventilation or exhaust system.</p> <p>Ducts for a solid fuel appliances' hood are not combined with ducts for gas or other types of fuel.</p> | |

¹ Term defined in the 2014 Vancouver Building By-law (VBBL)

K2 - Kitchen Ventilation Details Checklist cont'd.

| No. | Item | Professional's initials signifying project complies (or mark N/A) | | |
|---|--|---|---|--|
| 10 | <p>The following terms are defined differently in the VBBL for fire separations than in NFPA 96 for clearances. Using the NFPA 96 definitions, construction is:</p> <p>Exterior wall's cladding (choose one): combustible <input type="checkbox"/> limited-combustible <input type="checkbox"/> non-combustible <input type="checkbox"/></p> <p>Ceiling assembly (choose one): combustible <input type="checkbox"/> limited-combustible <input type="checkbox"/> non-combustible <input type="checkbox"/></p> <p>Shaft construction (choose one): combustible <input type="checkbox"/> limited-combustible <input type="checkbox"/> non-combustible <input type="checkbox"/></p> <p>Top of roof assembly (choose one): combustible <input type="checkbox"/> limited-combustible <input type="checkbox"/> non-combustible <input type="checkbox"/></p> <p>Behind hood(s) (choose one): combustible <input type="checkbox"/> limited-combustible <input type="checkbox"/> non-combustible <input type="checkbox"/></p> | | | |
| 11 | <p>Min. clearances from the hood(s) (e.g., to ceiling tiles & back wall) are (choose applicable ones): (if from combustibles:) 18" <input type="checkbox"/> / 9" w 28-gauge+spacers <input type="checkbox"/> / 3" w 22-gauge on insul.+spacers <input type="checkbox"/> (if from limited comb:) 3" <input type="checkbox"/> / 0" + non-combustible Material <input type="checkbox"/> (if from non-combustible:) 0" <input type="checkbox"/> If another clearance, attach listing.</p> | | | |
| 12 | <p>Minimum clearances from ductwork and associated equipment where there is no shaft is (choose applicable ones): (if from combustibles:) 18" <input type="checkbox"/> / 9" w 28-gauge+spacers <input type="checkbox"/> / 3" w 22-gauge on insul.+spacers <input type="checkbox"/> (if from limited comb:) 3" <input type="checkbox"/> / 0" + non-combustible Material <input type="checkbox"/> (if from non-combustible:) 0" <input type="checkbox"/></p> <p>If another clearance, attach listing.</p> <p>Protection for the wall from the floor to the hood is provided.</p> | | | |
| 13 | <p>Minimum clearance between the shaft and the duct is (choose one): Shaft: combustible <input type="checkbox"/> / limited combustible <input type="checkbox"/> / non-combustible <input type="checkbox"/> Clearance: 18" <input type="checkbox"/> / 6" <input type="checkbox"/> / 6" <input type="checkbox"/> If another clearance or an alternative to a shaft, attach listing.</p> | | | |
| 14 | <p>Fire-resistance rating for the duct's shaft = _____</p> | | | |
| 15 | <p>When the clearance between the heat source and grease removal device is less than 18", protection such as a steel baffle plate will be provided in conformance with 6.2.2. (e.g., between the appliance's flue outlet and the hood's filter for high-mounted salamanders, woks).</p> | | | |
| 16 | <p>The following minimum is provided between deep fat fryers and the surface flames from adjacent equipment (choose one): 16" space <input type="checkbox"/> / 8" high steel <input type="checkbox"/></p> | | | |
| 17 | <p>The fire suppression complies with NFPA 96, the manufacturer's specifications, and one of the following: UL300 or ULC/ORD 1254.6 or UL197.</p> | | | |
| 18 | <p>The manual activation of the fire extinguisher is located in the egress path in a familiar location for kitchen staff to use and is $\geq 42"$ & $\leq 48"$ above the floor.</p> | | | |
| 19 | <p>If there is a fire alarm system, the kitchen fire suppression (choose one):</p> <table border="0" style="width: 100%;"> <tr> <td style="width: 50%; vertical-align: top;"> <input type="checkbox"/> annunciates as a separate zone on the building's fire alarm system and annunciates separately from other kitchen fire suppression system(s) that are on different storey(s). </td> <td style="width: 50%; vertical-align: top;"> <input type="checkbox"/> shares activation with the local fire alarm zone since there are no other available zones in the existing panel. </td> </tr> </table> | <input type="checkbox"/> annunciates as a separate zone on the building's fire alarm system and annunciates separately from other kitchen fire suppression system(s) that are on different storey(s). | <input type="checkbox"/> shares activation with the local fire alarm zone since there are no other available zones in the existing panel. | |
| <input type="checkbox"/> annunciates as a separate zone on the building's fire alarm system and annunciates separately from other kitchen fire suppression system(s) that are on different storey(s). | <input type="checkbox"/> shares activation with the local fire alarm zone since there are no other available zones in the existing panel. | | | |
| 20 | <p>For all the hoods on one ventilation system, all sources of fuel to all appliances will shut off upon fire suppression activation in any one of the hoods, including shut off of gas to all appliances under the hoods and shut off of electric power to electrical outlets under the hoods.</p> | | | |

K2 - Kitchen Ventilation Details Checklist cont'd.

| No. | Item | Professional's initials signifying project complies (or mark N/A) | | |
|--|---|--|--|--|
| 21 | <p>Under non-fire conditions, the following are interlocked:</p> <ul style="list-style-type: none"> ▪ make-up air and exhaust so that they operate together ▪ if applicable, direct-fired make-up air heater and exhaust so the heater can only operate if the exhaust is on [VBBL, Division B, Sentence 6.3.2.8.(2), ULC-S647-05 6.5, B149.1-05 7.20.3 (b)] ▪ exhaust and appliances so as to cause the exhaust to operate when cooking equipment is turned on <p>Start-up sequence will be as follows, with shut-down in reverse order: i) make-up air fan, ii) exhaust fan, iii) direct-fired make-up air heater, iv) cooking equipment</p> | | | |
| 22 | <p>(choose one):</p> <table border="0" style="width: 100%;"> <tr> <td style="width: 50%; vertical-align: top;"> <input type="checkbox"/> All access panels are accessible from within the cooking operator's suite or via common property. </td> <td style="width: 50%; vertical-align: top;"> <input type="checkbox"/> All access panels are accessible to the landlord and attached is a letter from the landlord either confirming that the landlord will provide the maintenance or confirming that the landlord gives permission to this tenant to access the panels not in the tenant's area for maintenance. </td> </tr> </table> | <input type="checkbox"/> All access panels are accessible from within the cooking operator's suite or via common property. | <input type="checkbox"/> All access panels are accessible to the landlord and attached is a letter from the landlord either confirming that the landlord will provide the maintenance or confirming that the landlord gives permission to this tenant to access the panels not in the tenant's area for maintenance. | |
| <input type="checkbox"/> All access panels are accessible from within the cooking operator's suite or via common property. | <input type="checkbox"/> All access panels are accessible to the landlord and attached is a letter from the landlord either confirming that the landlord will provide the maintenance or confirming that the landlord gives permission to this tenant to access the panels not in the tenant's area for maintenance. | | | |
| 23 | Min. 3 ft clearance will be provided beside all access panels for an exhaust cleaner to work. | | | |
| 24 | Safe work areas are provided around fan(s) and beside access panels c/w provisions for fall protection. | | | |
| 25 | <p>The exhaust and make-up air fans have been chosen so that their noise levels are in compliance with the Vancouver Noise Control By-law No.6555, i.e., at 1.2 m above the ground at the property line in a Quiet Zone, the noise will be not more than 55 dBA² between 7 am and 10 pm (10 am - 10 pm Sundays and holidays) and will not be more than 45 dBA between 10 pm and 7 am (10 am - 10 pm Sundays and holidays). (Refer to the Noise Bylaw for the higher permitted maximum noise levels in Intermediate and Activity Zones: http://vancouver.ca/your-government/noise-control-bylaw.aspx)</p> <p>Where there are dwelling units within the building or in an adjacent building (even in Intermediate or Activity Zones), the fan(s) will not create more noise than permitted by the above Quiet Zone criteria when measured from inside those dwelling units. Note: conditions to consider are reflections off the immediate wall(s) or roof that the fan is mounted on ("directivity factor" increases in corners), reflections off neighbouring building surfaces, insulating the ducting for noise reduction, etc.</p> <p>Since traffic noise is typically the assumed noise source that exterior walls have been acoustically designed for to satisfy the max. noise criteria in the Zoning & Development By-law (e.g., max. 35 dBA in Zone C-3A bedrooms), the kitchen ventilation fans have been designed to create no more noise than the estimated outside traffic noise.</p> | | | |

² The following formulas are provided as reference only:

$$L_p = L_w + 10\log_{10}Q - (20\log_{10} d) - 11, \text{ where}$$

L_p is sound pressure level at distance d from sound source [dB]

L_w is sound power level of sound source [dB]

Q is directivity factor associated with the way sound radiates from sound source [hemisphere = 2]

d is distance from acoustic center of source to distant point [m]

Where the sound is radiating hemispherically, the following are reasonable approximations.

$dBA = 33.2\log_{10}(\text{Sones}) + 28$, where dBA is the sound pressure level at 1.5 m from the fan (i.e., conversion from Sones to dBA).

$\Delta dBA = -20\log_{10}(1.5/d)$, where d is the distance from the fan [m] and ΔdBA is the loss in sound pressure level from the fan to the distance d .
